Minimal States - to individual states

The minimal state is the ideal of classical liberals, whose aim is to ensure that individuals enjoy the widest possible realm of freedom. This view is rooted in social-contract theory, but it nevertheless advances an essentially 'negative' view of the state. From this perspective, the value of the state is that it has the capacity to constrain human behaviour and thus to prevent individuals encroaching on the rights and liberties of others. The state is merely a protective body, its core function being to provide a framework of peace and social order within which citizens can conduct their lives as they think best. In Locke's famous simile, the state acts as a night watchman, whose services are called upon only when orderly existence is threatened. This nevertheless leaves the 'minimal' or 'night watchman' state with three core functions (First) and foremost, the state exists to maintain domestic order. Second, it ensures that contracts or voluntary agreements made between private citizens are enforced, and third it provides protection against external attack. The institutional apparatus of a minimal state is thus limited to a police force, a court system and a military of some kind. Economic, social, cultural, moral and other responsibilities belong to the individual, and are therefore firmly part of civil society. (Heywood, 2013)

Differences in Living Standards

Changes in living standards over time are also large. In the United States, incomes have historically grown about 2 percent per year (after adjusting for changes in the cost of living). At this rate, average income doubles every 35 years. Over the past century, average U.S. income has risen about eightfold.

What explains these large differences in living standards among countries and over time? The answer is surprisingly simple. Almost all variation in living standards is attributable to differences in countries' productivity—that is, the amount of goods and services produced from each unit of labor input. In nations where workers can produce a large quantity of goods and services per unit of time, most people enjoy a high standard of living; in nations where workers are less productive, most people endure a more meager existence. Similarly, the growth rate of a nation's productivity determines the growth rate of its average income. (Mankiw, 2014)
